

VILLAGE GREEN

Tree No	Tree Tag	Diameter at Breast Height (dbh)	Species	Tree survey & tree officer comments	Action
T001	61	90cm	Horse Chestnut	Feb 23 :Basal decay on eastern aspect. Decay is present around a buttress and extends into heartwood. Column of decay rises to the north scaffold stem. Tree is within proximity to busy road and pond. While other decay is not apparent on other aspects of the stem; may be more extensive internally based on the eastern aspect but not detectable externally. Crown exhibits lower quality physiological condition. Nov 23 - There is definitely decay at the base and this is a very high risk area. This large tree is slightly suppressed between two big limes, which would be likely to expand their crowns into the space created by its removal.	Fell to ground level, 30cm high stump to be retained. Remove all arisings.
T002	62	80 cm	European Lime	Decayed western branch at approximately 9 metres.	Take out dead wood: Tree Officer saw 3 dead branches.(i) low on South stem, reaches East. (ii) on West side, high up on North stem. (iii) on West side, at top of South stem. Check for other dead wood while climbing, and remove. Remove all arisings.
